# VALUE STREAM MAPPING

Detect Waste From Start to Finish

3

3 Day Program | On-Site

**Every product moving through your facility needs a value stream map to identify the most efficient way to bring it from raw materials to customer-ready.**

Value stream mapping is a fundamental lean manufacturing technique used to identify all the value-added and non value-added actions required to optimize product or information processes. In this exercise, you visualize the current and future states of product or information to see where the process is wasting time, materials, labor, and more.

**At the end of a VSM event, you'll have a flow chart that depicts how to move product or information in a way that keeps costs low and quality high.**

## WHAT WE DELIVER

- **Current State Map:** Together, we'll create a visual representation of the current state of the value stream. This includes all of the steps, processes, and information flows involved in delivering information or providing a service. This visual process helps identify bottlenecks, delays, and waste.
- **Value-Added and Non-Value-Added Activities:** We'll work with you to discover activities that add value from the customer's perspective and those that do not. Non-value-added activities often become targets for improvement or elimination.
- **Future State Map:** Based on the analysis of the current state, you'll receive a future state map that represents an ideal, more efficient version of the value stream. This involves implementing improvements to eliminate waste, reduce lead times, and enhance overall flow.

## WHAT YOU GAIN

- Deliver greater value to your customers
- Get clear visual representation of the entire product and information processes.
- Identify opportunities for productivity improvement and waste reduction
- Make better decisions with data and insights gained from process improvement
- Improve quality processes and on-time delivery
- Decrease work-in-progress inventory

**Tighten Up By Finding Leaks in Your Processes.**

**Book an engagement today!**
